ParcelWalah - Platform Feature Review

Measured against a ready-to-launch delivery platform brochure - 17 October 2026

The brochure this is measured against advertises "100+ built-in features" for a white-label delivery platform. That count is a sales figure: it includes items such as FAQs, a logo and app-store links. What follows takes its feature list section by section and checks each claim against what ParcelWalah actually runs today.

Every status was verified in the codebase rather than from the brochure or from memory. **Built** means it works end to end. **Partial** means the mechanism exists but something real is missing. **Missing** means there is no implementation.

43	3	29	1
capabilities built	partial	not built	blocks a release

Customer app

Capability	Status	Where it stands
Instant booking	Built	Hyperlocal and intercity, both live
Upfront fare with breakdown	Built	Per-city rate card drives the quote
Live tracking	Built	Map view on the order screen
OTP-secured pickup and drop	Built	Separate OTP at each end, verified server-side
Promo codes	Built	Flat and percentage, usage limits, first-order rules
Saved addresses	Built	Plus suggestions ranked by the customer's own city
Online payment and cash	Built	PayU for prepaid, COD settled into the rider ledger
Rate and review driver	Built	Rating stored against the booking
Invoice	Built	GST percentage configurable for intercity
Numbers hidden by stage	Built	Receiver shown only after pickup; rider hidden once done
Phone OTP login	Built	SMS OTP; Google sign-in not offered
Vehicle by goods type and weight	Partial	Parcel type and weight captured; no vehicle class picker
Scheduled bookings	Missing	A delivery date is stored but nothing dispatches on it
Share tracking link	Missing	Tracking is in-app only
Masked calling	Missing	Numbers are hidden, so neither side can call at that point
Customer wallet, cashback, credits	Missing	No customer-side wallet
Multi-stop (several drops per order)	Missing	One pickup, one drop
Hourly rental packages	Missing	Not part of the current model
In-trip chat	Missing	
Emergency / SOS contacts	Missing	
Refer-and-earn	Missing	
In-app support chat	Missing	
Self-serve account deletion	Missing	Google Play requires this - see the closing section

Driver app

Capability	Status	Where it stands
Guided digital onboarding	Built	Step-by-step, and it resumes where the rider left off
Auto-verified KYC	Built	PAN and driving licence verified live; Aadhaar via DigiLocker

Capability	Status	Where it stands
One-tap duty on / off	Built	
Order alerts with accept timer	Built	30-second window, floating card over other apps
Step-by-step trip flow	Built	Five stages for intercity, four for hyperlocal
Earnings dashboard	Built	Passbook with running balance
Online hours and stats	Built	Duty timer on the home screen
Withdraw earnings to bank	Built	Request, approval, then transfer
Rate card in the app	Built	Driven by the admin console, per city
RC verification (Vahan lookup)	Missing	RC photo collected but never checked against the registry
Verified bank accounts	Missing	Payouts go to an unverified account number
In-app training videos	Missing	
Book walk-in customers	Missing	

Dispatch

Capability	Status	Where it stands
Auto-match nearest driver	Built	Distance-ranked, declined offers excluded
Custom search radius and timeout	Built	Both set from the admin console
Auto-retry and no-driver alerts	Built	Re-offers, then auto-cancels and notifies admins
Service areas drawn on map	Built	Per city, boundary or radius, on Google Maps
Double-booking protection	Built	First accept wins, enforced in a transaction
Manual dispatch	Built	Admin can assign from the booking page
Live map of all drivers	Missing	No fleet-wide view
Scheduled orders auto-start	Missing	Follows from scheduling being absent
Per-city vehicle distance limits	Missing	

Pricing and revenue

Capability	Status	Where it stands
City-wise fares	Built	Each city overrides only what it needs
Base, per-km and minimum fares	Built	Separate cards for hyperlocal and intercity
Waiting charges after free time	Built	
Cancellation charges	Built	Applies once a rider is assigned
Platform commission per trip	Built	Configurable; currently set to zero
Rider rate card, per city	Built	Base, distance bands and per-minute, set by admin
Cash dues and driver wallet	Built	Cash is the rider's earning; wallet holds only what is owed
Weather and traffic surge	Missing	
Extra fare per additional drop	Missing	Follows from multi-stop being absent
Rental extra km and time rates	Missing	

ParcelWalah - Platform Feature Review

Measured against a ready-to-launch delivery platform brochure - 17 October 2026

Finance and payouts

Capability	Status	Where it stands
Unified money ledger	Built	Passbook reconciles to the wallet balance
Withdrawal approval workflow	Built	Weekly limit enforced
Payouts to bank	Partial	PayU Payouts written and wired, not yet tested with live credentials
Auto status tracking and retry	Built	Reconciler polls the provider rather than assuming
Manual wallet credit / debit	Partial	Adjustment entries exist; no admin screen for them
Two-factor approval on large payouts	Missing	
Automatic GST invoices	Missing	GST is calculated, but no invoice document is generated
Excel and PDF exports	Missing	

Admin console

Capability	Status	Where it stands
Real-time dashboard	Built	
Manage users, riders and bookings	Built	
Onboarding review queue	Built	Shows which documents are missing, with contact number
Cities and launch playbook	Built	Targets against actuals, stage and go-live checklist
Coupon management	Built	
Push notifications	Built	Broadcast and targeted
Roles and co-admins	Built	Super-admin gated
Force update and maintenance mode	Missing	Matters most when a fix needs a new build, not an update
Audit trail of staff actions	Missing	
Support ticketing and call centre	Missing	
Banners and campaign content	Missing	
Sales team module	Missing	A separate business line, not a gap in delivery

Where ParcelWalah goes further

Three things in the platform are not in the brochure at all: **intercity delivery** priced on its own rate card and progressed by the operations team; a **per-city rider rate card** that the rider sees in their own app; and **Aadhaar verification through DigiLocker**, confirmed with the provider rather than assumed from a browser redirect.

Different, not missing

The brochure names Razorpay, Cashfree, IDfy and Exotel. ParcelWalah uses PayU for both collection and payouts, CGPEY for identity checks, Renflair for SMS and Cloudflare R2 for document storage. These are vendor choices doing the same job - the only genuine absence in that list is call masking.

What to do first

1. In-app account deletion. Google Play requires any app with sign-in to offer account deletion inside the app and at a public web address. There is no such path in either app today. This is the one item on this page that can hold up a release, and a build is about to be submitted.

2. Bank account and RC verification. Both already exist in the identity provider that is wired in - they are endpoints not yet called. Paying out to an unverified account is the most expensive failure on this list, and an unverified RC is a rider on the road with a vehicle nobody checked.

3. Force update and maintenance mode. Some fixes cannot ship over the air; without a way to require a new build, riders stay stuck on an old one.

Scheduling, masked calling and multi-stop come after those. The rest - rentals, surge, a sales module, a call centre - describe a larger operation than the one being run today, and are worth revisiting when that changes.
